PROJECT

Implement Route Planner

A part of the Intro to Self-Driving Cars Program

	PROJECT REVIEW
CODE REVIEW 5	
	NOTES
hare your accomplishment! 🔰 📫 Meets Specifications	
·	Also evidences a good understanding of the A* search algorithm.
real job! Your code is very clear and easy to read. 7	Also evidences a good understanding of the A* search algorithm.
correctness	
Running test.py shows "all tests pass".	
Your code passes all tests!	
Student's shortest_path method implements	A* search.
Your code evidences a good understanding of the	A* search algorithm!
	ance between two intersections is guaranteed to return a distance which is less than or equal to the true path length
between the intersections. Good call choosing the straight line euclidean dist	tance for the heuristic function.
between the intersections. Good call choosing the straight line euclidean dist	tance for the heuristic function.
Good call choosing the straight line euclidean dist	tance for the heuristic function.
Good call choosing the straight line euclidean dist	tance for the heuristic function.
Good call choosing the straight line euclidean dist	tance for the heuristic function. Indicate the heuristic function.
Good call choosing the straight line euclidean dist	nd takes advantage of the performance improvement afforded by sets / dictionaries where appropriate. For example,
Good call choosing the straight line euclidean distribution. Choice and Usage of Data Structures Code avoids obvious inappropriate use of lists and data structure like the "open_set" on which men	nd takes advantage of the performance improvement afforded by sets / dictionaries where appropriate. For example,
Good call choosing the straight line euclidean distribution. Choice and Usage of Data Structures Code avoids obvious inappropriate use of lists at data structure like the "open_set" on which men Great choice of data structures!	nd takes advantage of the performance improvement afforded by sets / dictionaries where appropriate. For example, mbership checks are frequently performed (e.g. <code>if node in open_set</code>) should not be a list.

Good call choosing the straight line euclidean distribution. Choice and Usage of Data Structures Code avoids obvious inappropriate use of lists at data structure like the "open_set" on which men Great choice of data structures!	and takes advantage of the performance improvement afforded by sets / dictionaries where appropriate. For example, if node in open_set) should not be a list. Solution of the performance improvement afforded by sets / dictionaries where appropriate. For example, in open_set) should not be a list.
Good call choosing the straight line euclidean distribution and Usage of Data Structures Code avoids obvious inappropriate use of lists at data structure like the "open_set" on which men Great choice of data structures! This item is a judgement call. Student code doesunnecessary duplication of lists	and takes advantage of the performance improvement afforded by sets / dictionaries where appropriate. For example, mbership checks are frequently performed (e.g. if node in open_set) should not be a list. Son't need to be perfect but it should avoid big performance degrading issues like
Good call choosing the straight line euclidean dist	and takes advantage of the performance improvement afforded by sets / dictionaries where appropriate.
